

Imperium® Declaration of Conformity and Compliance

Imperium® Steel Tank Range

Atlantis Tanks Group Ltd hereby declares that the **Imperium® range of rectangular enclosed steel bunded storage tanks** is designed and manufactured in compliance with applicable standards, safety requirements, and best practices for fuel and liquid storage.

Product Construction and Design

- The **inner tank** is manufactured in accordance with **BS 799, Part 5**, with steel sheet thicknesses selected to suit the required storage capacity.
- The **outer bund** is engineered to provide a minimum of **110% containment capacity** of the inner tank.
- A **venting system** is incorporated to ensure that any overfill is safely directed into the bund cavity.
- Bund cavities can be fitted with **leak detection systems**, including gauges or alarms, to provide early warning of overfilling or leakage.

Safety and Operational Features

- With the exception of Heating Oil (HOI) tank models, all Imperium® tanks are supplied with **top-mounted connections only**, suitable for filling, suction outlets, drains, gauges, and pumps.
- With the exception of HOI tank models, Atlantis Tanks Group does **not supply bottom outlets through the bund wall** unless explicitly requested by the client, to ensure maximum safety and environmental protection.
- HOI tank models are supplied with one 1" bottom outlet for the supply of Heating Oil as per normal industry practice. All bottom outlets are leak tested

Compliance and Quality Commitment

The Imperium® steel tank range has been developed in line with industry regulations, ensuring safety, durability, and environmental protection. Every unit is subject to stringent quality control and inspection procedures prior to dispatch.
