

Sump Floor - BF8

Backed by our 3-year guarantee

A low profile 8-drum sump floor is only 150mm high moulded from medium-density polyethylene. The BF8 is comprised of 2 separate BF4 units connected using our joining strip & optional sump connector. This can be further joined with other units to create unlimited bunded areas. The units can be joined together with plastic connectors to inter-link the sumps and each injection moulded mesh floor has a 2000kg static weight load. Each unit comes with 2 separate removable grids (4 total). Optional ramps are available for easier decanting.

The sump will not include pre-drilled holes. Please see the 'BF8 Configuration' document for instructions.

You will require an appropriate size/capacity fork lift truck to offload this item from the delivery vehicle. Our standard delivery doesn't include any offloading.
